

Community Supervision Strategies

| | |
|-----------------|---|
| Project Title | Community Supervision Strategies |
| Project Summary | Researching and developing descriptive and interactive content for a microsite on current and promising community supervision strategies. This site will include both hard and soft skills, such as technology used (GPS, SmartPhones) and interviewing techniques. |
| Country | United States |

Project Description

The field of community supervision has altered dramatically over the past 10-15 years. With the advent of new technology, many departments are using more and different tools to support their work. These tools may include Global Position Systems (GPS), electronic monitoring, mobile devices, mobile reporting (by offenders), body-worn cameras, reporting kiosks, and other technology.

There are also remarkable changes to internal operations such as electronic case management, virtual reality based training and computerized risk assessments. While the underlying principles of supervision remain the same, it is a difficult and confusing process to sort out the pros and cons of all the available choices.

For each topic area, the microsite (currently in development) would include descriptions of the technology, any available research, any best or promising practices, examples from agencies currently using the technology and their policies, and in some case video testimony from officers and offenders about their experience.

The microsite would also include information as stated above on some of the “soft skills” that officers use and also current practices around wellness and trauma response for critical incidents.

Required Skills or Interests

| |
|-------------------------|
| Skill(s) |
| Design thinking |
| Research |
| Social media management |
| Videography |
| Writing |

Additional Information

Once launched, this will be the only product of its kind and will be available to any community supervision agency. Please see our main website at: <https://nicic.gov/> and examples of microsites at: <https://info.nicic.gov/>

Language Requirements

None
